## **CUSTOM LANDING PAGE: FasterClass.finance**

Please build a mobile-responsive landing page for my SaaS startup, in html, css and javascript that is simple, clean and contemporary.

This landing page must contain the 17 steps below, from Sabri Subri's teachings. Each step is numbered 1-17. The customer should want to keep reading down the 17 steps, as they learn how they can make more money. Feel free to refer to Sabri Subri's "Sell Like Crazy" book or Alex Hormozi's "100x" books.

Underneath each step, indented, is detail about that part of the landing page. Instructions below each of the 17 steps that are in brackets, i.e. '< place an image here >', refer to a url link or an image. Instructions below each of the 17 steps that contain an asterisk at the start, i.e. "\*Here be CONCISE and PERSUASIVE, and come up with..." , means that your ai should create this step.

Use a two-tone color scheme against white, to keep the landing page simple and clean. Make sure to make the two tones of color used, defined as variables in the CSS file so they can easily be changed to a different two-tone color scheme. Use fonts sans-serif, and also highlight key selling features where appropriate with bold or italics to stress a key feature.
